

Call for SAIP Weekly Webinar Topics - 2022

The 2022 series of SAIP Webinars will start in February 2022. The SAIP is therefore inviting interested stakeholders and members of the physics community to present 1 hour talks at this year's webinar series. During 2022 the SAIP will commemorate two important events:

- (1) **The International Year of Basic Science for Sustainable Development (IYBSSD)** (www.iybssd2022.org) The SAIP Seminar Series presents a platform to discuss and communicate the immense potential benefits to be derived from physics education and research, and how physics in South Africa is significantly contributing to addressing socio-economic challenges and the Sustainable Development Goals (SDGs). **SAIP is inviting you to share your work on the use of physics and/or current research that aims to address energy, clean environment, agriculture, climate change, health, water, industrialisation, smart materials, big data, education among many others areas.**

- (2) **100 Years of Physics in Africa - "Past, Present and the Future"**
This initiative is prompted by the 100th year anniversary of the International Union of Pure and Applied Physics (IUPAP). <http://www.saip.org.za/100YearsOfPhysics/> **The SAIP is inviting you to share your story and desired future for Physics in Africa during the weekly webinars.** There are many beautiful and inspiring stories on how Physics is thriving, changing lives, bringing development and impacting different parts of Africa, even producing world-class research and Physicists with bare minimum resources, but the World never gets to hear of these incredible success stories from Africa.

To submit an abstract for the SAIP weekly webinars please visit <https://events.saip.org.za/event/210/>
